

Thank You for Choosing Figgins Trees & Turf!

Follow the instructions below to ensure your new sod stays healthy

Week 1

It is important to **consistently water** your new lawn because the sod needs to be able to adhere/ take root to the soil below. Water your new lawn heavily. Water it until it is too wet to walk on.

Weeks 2-3

It usually takes a full two weeks for the sod to take root, so at this point you will only need to water your lawn **once a day for 20 minutes.**

Continued Care

Water your lawn on warm/dry days. We recommend **cutting 1/3 off of the height of the lawn every 10 days.**
